

Cylinder pressure regulator KD 86 - VA

Model	Gas	Inlet pressure P1	Outlet pressure P2	Flow Q1	Inlet connection	Outlet connection
E 86 - VA	F,NF,NC,C,T (not Acetylene)	max. 300 bar	max. 16 bar	max. 76 m³/h Air	Cylinder DIN 477	Clamp screw Ø6

The KD 86 - VA is a regulator for corrosive gas and reduces, through two independent operating reduction stages, the max. cylinder pressure of 200 bar down to max. 16 bar.

The KD 86 is a two stage stainless steel regulator with relief valve.

The regulator can also be supplied with a shut-off valve, hand connection and metal diaphragm.
